

Residents of the Village of Saint-Antoine

Rue des Arts Elevated Water Tank Upgrades

In order to continue providing safe and reliable water, the Village is proceeding with a rehabilitation of the existing municipal water storage reservoir on Rue des Arts. As a result of this work, the reservoir has been drained and temporarily taken out of service while the rehabilitation takes place. During the work, manual operation of the existing municipal wells will be used to maintain water supply in the system.

As a result of removing the water storage reservoir from the system, and until the reservoir rehabilitation is complete, **you could experience drop in the available water pressure and available water volume, effective from Friday, September 25th, 2020.**

Until the reservoir rehabilitation is complete and the water storage reservoir is returned to use, it is requested that residents minimize their water usage. Additional information and updates will be posted in public areas within the municipality and through social media and local radio stations as needed.

The Town has obtained the required approvals to proceed with the work. The duration of the rehabilitation work is expected to last up to seven (7) weeks. It is anticipated that the reservoir rehabilitation should be completed by early November 2020 and return to normal operation.

Until the reservoir rehabilitation is complete, it is requested that residents minimize their water usage.

It shall be noted that during this period, the fire protection system will be at a minimum and that certain additional precautions have been put in place with the fire department. However, if your facility is equipped with a sprinkler system, it will be necessary for you to advise your insurance company and the system supplier in order to apprise them of the situation and to confirm if any adjustments are required to your specific system.

We apologize for any inconvenience and request your cooperation in this matter while the Village continues to complete required maintenance to the water system that will ensure safe, clean drinking water for the residents of Saint-Antoine.

Sincerely,

Village of Saint-Antoine
